Modular Positioner Systems

Welding Positioner PRO 4 PN

Perfectly positioned

When choosing a turntable, the turning and tilting moment must be considered by all means. The distance between the center of gravity of the workpiece and the faceplate must be considered and the eccentric distance of the center of gravity and the center respectively. Don't forget

the weight of the clamping device. It is often higher than the weight of the workpiece itself. The workpieces can be positioned optimally for welding with a turning and tilting table. This improves productivity and quality significantly.

When choosing your positioner, please consider

- the center of gravity of your workpiece
- the weight of your tensioning device (chuck)
